A method of making a semiconductor device comprising formation of a silicon semiconductor film and crystallization of the silicon film, particularly characterized by terminating dangling bonds on a surface of the crystallized silicon film with oxygen and doping the crystallized silicon film as recited in independent claims 2 and 29.

A method of making a semiconductor device comprising formation of a silicon semiconductor film and crystallization of the silicon film, particularly characterized by terminating dangling bonds on a surface of the crystallized silicon film with an element to be bonded with a bonding energy higher than that of Si-H bonds, and doping the crystallized silicon film as recited in independent claims 3 and 30.
